

1

Dear Sir / Madam,

I am writing to you because my computer is outdated, therefore i would like to ask a new one. I use my computer every day during my work, and i noticed it was working very slowly.

It is essential for my work to use several program at the same time. It is very demanding for my computer, if i run a spreadsheet and a mail program at the same time. These problems are hinder me at work.

My current computer starts up every morning in long minutes. I use current HDD. I would like to recommend, that replace it 256 GB Samsung SSD. In my opinions, this is better, than HDD, because it speeds up program launch times.

If you ask me, I think the biggest problem with my computer, that i currently use Dual core 1.6 GHz CPU, which is very outdated. Do you think you could switch them for I7 hexa core 3.2 GHz CPU? If I can to use the new CPU I need a new motherboard which can handel this processor. I would be grateful if you provide it for me too.

I would like to expand my current 2 GB memory to 16 GB memory because it would be good solution to use several program at the same time.

Besides, I need to a bigger HDD, because I have to work very often whit big video files. I want to ask 8 TB Western Digital winchester.

I want to need another 2 TB external winchester, because many times i cant send large files by email.

In my view, i dont need special video card, i can work my current device, because this was just replaced.

I have to look back lots of security camera screen, therefore i need two 27" monitor. It would be better, because when i see the camera screens, which often takes several hours, during that time, i dont do other tasks.

I would be most grateful, if you would look into this request as soon as possible. I look forward to hearing from you soon.

Yours sincerely,

Dániel Fülöp
