15. tétel – Deadline modification

Dear John,

Based on our previous consultation I'd like to inform you that I won't be able to finish the project before the deadline, as your requirements changed significantly.

The main causes of the delay are the following:

- The structure of the import file was changed significantly thus I have to restructure the core of the software to fit into the new environment. It will be a time-consuming procedure as all of the function of the program depends on these codes.
- According to your new demands I also need to modify the database of the program and update all the current records with the new information you required.
- In addition the report form also needs to be reworked to include the new attribute of the database.
- The modification of the search engine is also a must as it relies heavily on the database of the program. Therefore I have to modify the existing functions and program new functions for the proper functionality.

In my opinion there are three possible solutions for the problems:

- If you want these changes to be built into the program I will need approximately 2-3 more weeks of respite to finish the project entirely.
- To meet the original schedule we can consult about some minor changes that are manageable within the deadline.
- If you require all the changes within the deadline, we need to involve new senior developers into the project which will increase the costs of the work.

I am looking forward to your answer.

Sincerely,
Mészáros Lőrinc
